IN THE SPECIFICATION

A1 [32] When the motor is subsequently ~~energised~~energized again, the cam, follower pin 48 moves progressively from position 5 through position 6 to position 7 as shown in figure 3, and when the power to the motor is cut the cam follower pin 48 moves progressively from position 7 through position 8 to position 9 as shown in figure 3. It can be seen that with the cam follower pin 48 in either position 1 or position 9 the plunger is at the same axial position since the cam follower pin is at the same axial position.
